

FIRESTREAM™

A complete line of natural wood-smoked ingredients.

The FireStream™ range covers food ingredients and spices that are traditionally smoked with fresh smoke. Different wood types are used to smoke ingredients such as salt, various sugars, vinegars, oils, and spices like garlic and onion. The various woods add different flavor profiles, allowing food manufacturers to choose the exact flavor that fits the target application. Examples of labeling on final food products include "smoked salt" and "smoked chipotle."

APPLICATIONS:

Seasonings, snack blends, savory flavors, BBQ sauces, marinades, and rubs.

Meat and vegetable soups, including tomato, leek, and onion applications.

Savory spreads and pizza applications, including addition to dough or tomato sauce.

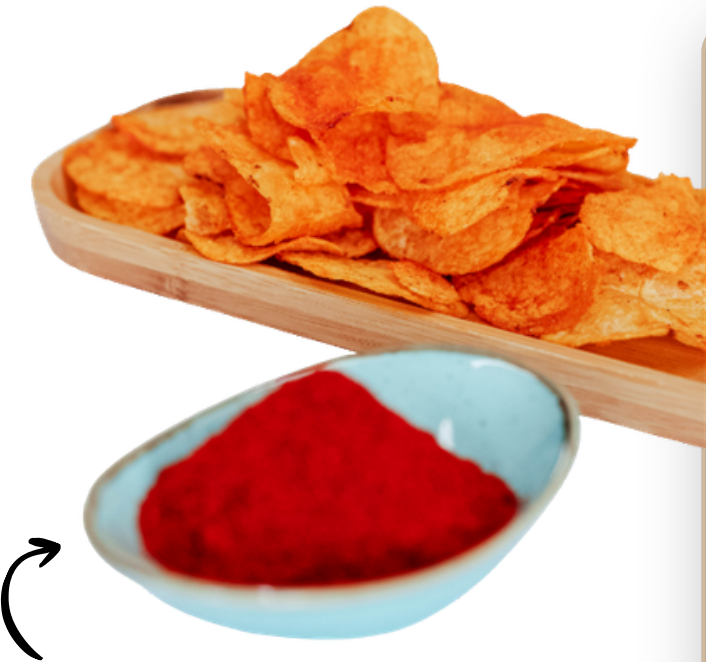

Deli meats, injection brines for meat, fish, and poultry, and meat emulsions.

Plant-based meat replacements and commercial savory food applications.

- Hickory Wood
- Beechwood
- Mesquite Wood
- Mixed Hardwood and others.

FIRESTREAM™ FLAVOR PROFILE

The type of wood, dosage, and the way the flavor is balanced with spices, sweeteners, salt, acids, and other ingredients all influence the final result. By selecting the right smoke profile and application level, manufacturers can build products with anything from a light background smoke note to a strong, authentic smoke impact that fits their target taste and product style. In addition, we offer a broad range of smoked ingredients, including garlic, onion, salt, and sugar, providing even greater flexibility in product development.

Explore our other smoked ingredients, including garlic, onion, salt, sugar, paprika, and more.
